AutoCAD is built on top of the product development environment (PDE). By default, a new AutoCAD installation creates a new PDE. When you initially start AutoCAD, it shows you the menus and objects available, so that you can start drawing. In a standard AutoCAD installation, you cannot directly edit the contents of the PDE. You can only use the applications and commands that come with the standard installation of AutoCAD. The installer ships with a standard set of applications and commands. To add additional applications and commands, you must make your own custom installation. The PDE is also where AutoCAD stores its settings, preferences, and template files. AutoCAD's default settings, preferences, and template files are stored in the PDE. However, you can also create and store your own templates and preferences. Normally, you start AutoCAD by selecting New. However, for some specialized uses, you can start AutoCAD from the command line. You can start AutoCAD from the command line in Windows and MacOS, as well as many Linux systems. The primary commands to use in AutoCAD are listed in the Tutorial for AutoCAD, and there are additional information on the AutoCAD homepage. AutoCAD is also available as a web app, where it can interact with various other applications on your local network. Differences from other CAD programs AutoCAD has the following primary differences from other CAD programs: • It is a drafting program, so it's not very good for creating 2D engineering drawings. • It can create complex, three-dimensional (3D) drawings, whereas other CAD programs are only capable of two-dimensional (2D) drawings. • It is capable of creating extremely detailed drawings, while other CAD programs are designed to limit the amount of detail that can be created. • It is much better suited for creating technical drawings for engineers and architects than it is for creating furniture. • It is capable of creating vector-based drawings, which are resolution-independent, meaning the line thickness and spacing can be changed as needed without altering the file's size. With most other CAD programs, resolution-independence is not possible. • It is capable of creating parametric 3D models, which can be combined to create engineering models with endless possibilities. Most other CAD programs do not support parametric 3D models. • It

The Services include: AutoCAD Online AutoCAD Online is a subscription-based online service for the Autodesk product family, including AutoCAD, Inventor, and Plant 3D. These services provide online collaboration, technical support, cloud-based file storage, mobile device connectivity, and integration into other AutoCAD services. LZ ArcGIS LZ is a mapping service provided by Autodesk. It is designed to allow users to visualize and interact with geospatial data, either in their web browser, through a desktop application or with AutoLISP software. LZ ArcGIS is one of the first web mapping services to support WGS-84/WGS-83 (used by Google Maps and all other mapping services), WGS-2000 (used by Bing Maps), and the World Imagery service. LZ ArcGIS allows users to create, edit and view, or build and publish web maps using a range of customization options. These options include importing and exporting data, mapping web services, custom web services, GIS data, and web mapping. LZ ArcGIS includes a content management system for managing maps, a pre-designed user interface, and an intuitive learning system. Mapping Services AutoCAD Online has a feature called Mapping Services, which is a system designed to connect third-party services to a customer's database, which can allow information to be accessed and viewed directly from the database using the application. It is an online service that can be accessed by Autodesk software users. Mapping Services allows users to connect any service that supports Microsoft Active Directory (for Windows computers), Lightweight Directory Access Protocol (LDAP) (for Windows, Mac, and Linux computers), or Microsoft Exchange Server (for Mac and Linux computers). a1d647c40b
