Purpose AutoCAD is used for 2D drafting, presentation and production of 2D or 3D images that depict an architect's or engineer's designs, concepts, and manufacturing processes, or architectural renderings and animations. AutoCAD is also used for 3D modeling, structural engineering, animation, surface and solid modeling, mechanical design, and drafting, among other uses. History AutoCAD is an application of Autodesk's "AutoCAD" brand. It was first developed by a team of designers and computer programmers, led by Bob Gill, at Autodesk in 1982. The team was led by Gill's former teacher at the University of New Hampshire, Dr. John Evans, who is credited with the initial development of

"AutoCAD." AutoCAD has been developed, supported, and sold by Autodesk since then. In 1982, AutoCAD was based on IBM PC DOS operating system. In 1984, the computer hardware was expanded to include Windows based PCs. The first version of AutoCAD was released in December 1982. Since then, Autodesk has made a number of updates, upgrades, and product releases for AutoCAD. In 1984, the product was named AutoCAD. In 1985, it was named CAD Manager. In 1986, it was renamed "AutoCAD." Computer software that is used to create 2D and 3D drawings is divided into two categories: CAD (computer-aided design) software and CAD/CAM (computer-aided manufacturing) software. Both AutoCAD and AutoCAD LT are examples of CAD/CAM software applications. There are numerous other types of CAD/CAM software, such as CAM

Architectural Visualization and Animation Software, RapidForm, StarCM (computer-aided design software that is used to create animated 3D models for use in web-based virtual environments), and Code-CAM (an integrated software development environment that is used to create both 2D and 3D CAD/CAM). AutoCAD LT was released in 2003. It was based on the same platform as AutoCAD, but it only runs on Microsoft Windows operating systems and it uses a text-based interface. Unlike AutoCAD, it is not sold as a perpetual license and is instead purchased with a subscription. AutoCAD Layers AutoCAD is a CAD program that allows a user to draw or edit on

Scripting In AutoCAD, scripting can be a very powerful tool to automate various tasks. AutoCAD has more than 150 commands that can be scripted. They are grouped into several categories: Pre-2016 edition: Miscellaneous File formats: The original AutoCAD can save its drawing as a DXF (drawing exchange format) file format. However, it can also save drawings in a DWG (drawing), PLT (plan template), AEP (AutoCAD extension package), and SCR (Scriptable Drawing) formats. Most current releases of AutoCAD can save drawings in an SVG (Scalable Vector Graphics) file format, which can be even used with any web browser. These files can be shared and viewed as PNG or JPEG images. The DWG format was developed by Autodesk in the mid-1980s as an interoperable drawing format with the DWF format, which was later created by Corel. Civil 3D uses DWG format

Data Management: Save drawings as text files (plain text) or as binary files. Drawing text files can be saved in a simple ASCII format (.dwt) or in a more complex format (.scr). Drawing files can be edited using a simple text editor or can be converted to DXF by a proprietary command.

Commands: Most commands in AutoCAD are scriptable; the user can select one or more command-line options to add custom functionality.

Post-2016 edition: Support for the Internet of Things: The Internet of Things (IoT) is a model for the connectivity of objects in a physical system, which provides a way to enable interaction between the physical world and the Internet.

AutoCAD applications can communicate with mobile devices, display data on the user interface, and connect to internet-enabled data sources. See also [List of AutoCAD commands](#) [List of 3D](#)

The icon must be located in the same directory as the Autocad executable.

Start notification The Autocad Notifier then sends the notification to the Notification Center. End notification To create a new notification, open the Preferences, go to the notifications section, add a new icon or folder. Select the check box to notify when the file ends. The icon must be located in the same directory as the Autocad executable. End notification The Autocad Notifier then sends the notification to the Notification Center.
